

RADIGREEN® LANDSCAPE CLASSIC

RADIGREEN® LANDSCAPE CLASSIC yarns are particularly suitable for decorative synthetic turf or for easy-to-lay home indoor or outdoor applications (balconies, terraces, swimming pool edges) or commercial surfaces (exhibition stands, show rooms).

UV RESISTANCE

Plastic materials can undergo a photo-chemical degradation caused by the sun light. To avoid this degradation, yarns are photostabilized using special anti UV additives. *Radigreen® Landscape Classic* yarns UV resistance is kept under constant control with artificial weathering light sources commonly used in accelerated weathering tests (Xenon, UVA and UVB).

The relevant data for each Radigreen® product are mentioned on the related technical datasheet.

CLEANING INFORMATION

Cleaning solid waste

To avoid degradation or rapid wear of the synthetic turf caused by solid waste, it is advisable to rapidly remove it with a broom.

Cleaning with liquids

For cleaning with liquids, use:

- ▶ *vinegar (5% white distilled vinegar), do not dilute and irrigate through the surface.*
- ▶ *"green" cleaners of any sort that do not contain alcohol and that are biodegradable. Non foaming and low suds detergents are the most suitable.*

Never use non-diluted alcohol, chlorine or ammonia since they can irreparably damage the turf yarn.
Use them diluted (maximum concentration 5%), only when necessary.

COUNT	RAW MATERIAL	FINISH	COLORS AVAILABLE
Up to 4.400	PE	Twisted fibrillated	Field Green & Other colors
		Curled KDK fibrillated	Field Green & Other colors
	PP	Twisted fibrillated	Field Green, Olive Green & Other colors
		Curled KDK fibrillated	Field Green, Olive Green & Other colors
From 5.600 to 8.800	PE	Curled KDK fibrillated	Field Green, Olive Green & Other colors
	PP	Curled KDK fibrillated	Field Green, Olive Green & Other colors
