

-Radyarn®-

SUPER MICROFIBRE YARN

Noyfil is able to offer a **100% micro filament** polyester with a count of **less than 0.3 dpf** (half the size of silk). The extreme fineness of each single filament makes this product **highly versatile and suitable for very compact fabrics** that are both waterproof and breathable, and with a feel that is different from virtually anything else.

Radyarn® super microfibre yarns are also suitable for "extreme-use" applications, such as garments that have to withstand very low outdoor temperatures. They are easy care, wear resistant and they withstand fading. They can be used in **combination with other yarns** to produce a wide range of fabrics with special finishes for a large field of applications (automotive interiors, technical articles, window coverings and home textiles).
